Government of India
Ministry of Health & Family Welfare
Immunization Division

Nirman Bhawan, New Delhi

Date: 6th February 2023

Causality assessment results of 1165 reported Serious Adverse Events Following Immunization (AEFI) cases approved by National AEFI Committee on 9th December 2022

The Immunization Division of Ministry of Health & Family Welfare has taken several steps to improve the National AEFI surveillance system, both the quality of investigation of cases at state level and their causality assessment at national level. Considering the importance and critical nature of the task, SOPs for causality assessment (CA) have been laid down as quality assurance. The results of causality assessment done by the CA subcommittee is discussed in the national AEFI committee meeting for final approval.

The results of the causality assessment for 1165 cases completed on **9th December 2022** after thorough review, deliberation and approval by the National AEFI Committee is given in the annexure (anonymized line list of the causality assessment done by the National AEFI Committee).

699 out of 1165 cases for which Causality assessment has been done were found to have **a consistent causal association to immunization**. Of these 699 cases, 445 cases were vaccine product related reaction, 179 cases were immunization error related reaction including 4 deaths and 75 were immunization anxiety related reactions. Three hundred forty-four cases have inconsistent causal association to immunization (**coincidental - not linked to vaccination**), including 163 death cases. Three cases were in indeterminate category including two deaths. One hundred nineteen cases were in unclassifiable category (all death cases).

Vaccine product related reactions are expected reactions that can be attributed to vaccination based on current scientific evidence. Examples of such reactions are allergic reactions and anaphylaxis, etc.

Indeterminate reactions are reactions which have occurred soon after vaccination but there is no definitive evidence in current literature or clinical trial data that this event could have been caused due to the vaccine. Further observations, analysis and studies are required.

Unclassifiable events are events which have been investigated but there is not enough evidence for assigning a diagnosis due to missing crucial information. When this relevant information becomes available, the case may be reconsidered for causality assessment.

Coincidental events are events that are reported following immunization but for which a clear cause other than vaccination is found on investigation.

Overall, the benefits of vaccination are overwhelmingly greater than the small risk of harm. However, as a measure of utmost precaution, all emerging signals of harm are being constantly tracked and reviewed periodically.

**CAUSALITY ASSESSMENT CLASSIFICATION OF 1165 AEFI CASES APPROVED BY THE NATIONAL AEFI COMMITTEE
09 DEC 2022 - (NEW DELHI)**

A1 - VACCINE PRODUCT RELATED REACTION

A2 - VACCINE QUALITY DEFECT RELATED REACTION

**CAUSALITY ASSESSMENT CLASSIFICATION OF 1165 AEFI CASES APPROVED BY THE NATIONAL AEFI COMMITTEE
09 DEC 2022 - (NEW DELHI)**

A1 - VACCINE PRODUCT RELATED REACTION

A2 - VACCINE QUALITY DEFECT RELATED REACTION

A3 - IMMUNIZATION ERROR RELATED REACTION

A4 - IMMUNIZATION ANXIETY RELATED REACTION

B1 - TEMPORAL RELATIONSHIP IS CONSISTENT BUT THERE IS INSUFFICIENT DEFINITIVE EVIDENCE FOR VACCINE CAUSING EVENT

B2 - REVIEWING FACTORS RESULT IN CONFLICTING TRENDS OF CONSISTENCY AND INCONSISTENCY WITH CAUSAL ASSOCIATION TO IMMUNIZATION

C - COINCIDENTAL - UNDERLYING OR EMERGING CONDITION(S), OR CONDITIONS CAUSED BY EXPOSURE TO SOMETHING OTHER THAN VACCINE

D - UNCLASSIFIABLE
