**Immunization Division**

**Nirman Bhawan, New Delhi**  
**Date: 18<sup>th</sup> April 2022**

**Causality assessment results of 167 reported Serious Adverse Events Following Immunization (AEFI) cases following Routine Immunization, approved by the National AEFI Committee on 16<sup>th</sup> November 2021.**

The Immunization Division of the MoHFW has taken several steps to improve the National AEFI surveillance system, including the quality of investigation of cases at the state level and their causality assessment at the national level. Considering the importance and critical nature of the task, SOPs for Causality Assessment (CA) have been laid down as quality assurance. The CA subcommittee's causality assessment results are discussed in the national AEFI committee meeting for final approval.

The results of the causality assessment for 167 cases completed on 16<sup>th</sup> November 2021 after thorough review, deliberation, and approval by the National AEFI Committee is given in the annexure (anonymized line list of the causality assessment done by the National AEFI Committee).

91 out of 167 cases for which Causality assessment has been done were found to have a **consistent causal association to vaccination**. Of these 91 cases, 75 cases were vaccine product-related reaction and 16 cases were immunization error-related reaction including 01 death. 64 cases have an inconsistent causal association to immunization (**coincidental - not linked to vaccination**), including 21 death cases. 03 cases were in the indeterminate category. There were 09 cases in the unclassifiable category including (all death cases).

Vaccine product-related reactions are expected reactions that can be attributed to vaccination based on current scientific evidence. Examples of such reactions are allergic reactions and anaphylaxis, etc.

Indeterminate reactions are reactions which have occurred soon after vaccination but there is no definitive evidence in current literature or clinical trial data that this event could have been caused due to the vaccine. Further observations, analysis, and studies are required.

Unclassifiable events are events that have been investigated but there is not enough evidence for assigning a diagnosis due to missing crucial information. When this relevant information becomes available, the case may be reconsidered for causality assessment.

Coincidental events are events that are reported following immunization but for which a clear cause other than vaccination is found on investigation.

Overall, the benefits of vaccination are overwhelmingly greater than the small risk of harm. However, as a measure of utmost precaution, all emerging signals of harm are being constantly tracked and reviewed periodically.

**CAUSALITY CLASSIFICATION OF 167 AEFI CASES REVIEWED AND APPROVED BY THE NATIONAL AEFI COMMITTEE**  
**16th Nov 2021 - (NEW DELHI)**

A1 - VACCINE PRODUCT RELATED REACTION

A2 - VACCINE QUALITY DEFECT RELATED REACTION

A3 - IMMUNIZATION ERROR RELATED REACTION

A4 - IMMUNIZATION ANXIETY RELATED REACTION

B1 - TEMPORAL RELATIONSHIP IS CONSISTENT BUT THERE IS INSUFFICIENT DEFINITIVE EVIDENCE FOR VACCINE CAUSING EVENT

B2 - REVIEWING FACTORS RESULT IN CONFLICTING TRENDS OF CONSISTENCY AND INCONSISTENCY WITH CAUSAL ASSOCIATION TO IMMUNIZATION

C - COINCIDENTAL - UNDERLYING OR EMERGING CONDITION(S), OR CONDITIONS CAUSED BY EXPOSURE TO SOMETHING OTHER THAN VACCINE

D - UNCLASSIFIABLE
